Protect your muscles from exercise-induced catabolism (EIC) and improve your caloric efficiency for more muscle with less fat. In the first moments of a workout your body begins signaling for enzymes that have only one purpose... to break down your muscle tissue for its vital, energy rich, essential amino acids. The more muscle that is broken down, the less growth you'll get and the longer it will take to recover. Nearly all of the protein synthesis that occurs after training is wasted on rebuilding; little is left for new growth. In fact, this process is more damaging for some people. This can make muscle growth frustrating and difficult for everyone—even for athletes that appear to be making gains.

Alpha Amino 1000 can help protect you from the negative effects of exercise-induced catabolism that occur in the first moments of your workout. Alpha Amino 1000 provides your body with a uniquely balanced combination of pharmaceutical-grade, free-form, essential amino acids that take only minutes to be assimilated and utilized to optimize your workout to peak performance.

Available in 250 & 500 count bottles

**Suggested Use:** As a dietary supplement of protein in addition to meals, take three (3) to five (5) capsules, three times daily, preferably with meals..

<b>Supplement Facts</b>
